

Leaf Mustard Growing Lesson

Techniques of growing Leaf Mustard

1. Preparing the soil

- ❖ Have to plow and dry the soil up for 7 to 15 days.
- ❖ After that have to plow the soil repeatedly 2 to 3 times in deep 20 to 30 centimetres.

2. Preparing the seedbed or ridge

- Making width ridge is 1 to 1.2 metres, as for length ridge is 20 metres or according to size of land.
- Making height ridge is 10 to 20 centimetres in dry season and 20 to 30 centimetres in rainy season.
- Have to use 20 baskets of natural fertilizer or compost.

3. Growing

- 📖 Have to prepare the seedbed and make the soil well before growing.

📖 Dry leaf mustard seed for 2 hours, after that, soak it in the water for 4 to 5 hours and then keep hidden in the ice box for 1 night or wrap seed with cloth and bury it in the ground for 1 night.

📖 Take 4 shares of sand to mix with seed and then take it to sow in the seedbed not loosely and not compact.

📖 When young leaf mustard is 10 days, we can take it to plant.

📖 Have to pull young leaf mustard which is healthy and same large size.

📖 Before pulling, have to stop watering young leaf mustard for 1 day.

📖 After watering young leaf mustard, have to pull it immediately.

4. Taking care

➤ Have to stick in the ground repeatedly at the clump of leaf mustard.

➤ Clean grass and watch for bugs.

➤ Provide water for leaf mustard wetly.

5. Harvesting

✓ When leaf mustard is 35 days, we can harvest the result.

Cucumber Growing Lesson

Techniques of growing Cucumber

1. Checking seed

- Select pure seed that can grow 85-90%.
- It endures with the weather.
- It has sources clearly.

2. Preparing the soil

- ❖ Hoe or plow the soil and dry it up for 7 to 15 days.
- ❖ After that plow to scarify the soil 2 or 3 times.

3. Raising the ridge

☺ Make width ridge= 5 Toeks (50cm), length ridge= depending on possibility (growing 1 line).

☺ Make width ridge= 1 metre, length ridge= depending on possibility (growing 2 lines).

☺ Make height of the ridge= 25 to 30 centimetres in rainy season, 15 to 25 centimetres in dry season.

- ☺ Use 5 to 6 kilograms of natural fertilizer in 1 square metre.

4. Growing

A. Growing directly: dig a hole in size 2 Toeks (20cm) of each side for 4 sides, put 0.5 to 1 kilogram of compost for a hole, dry cucumber seed for 1 hour and wash it with water and soak in the water for 4 to 5 hours and then keep hidden for 1 night (bury in the ground or ice box).

- Between in a clump of cucumber to another is 3 to 5 Toeks, space for walking is 4 to 5 Toeks (40 to 50 cm).
- Growing in 2 lines, between in chest is spaced out 3 to 5 Toeks (30 to 50 cm) as the V letter or as a triangle.

B. Germinating

- Mix together 50%, termite soil and compost of straw or natural fertilizer and then roast it or put it in black plastic bag and dry it up with sunlight for 2 to 3 days, mix it in the tray for germinating young plant.
- Make a roof to protect sun heat and use net to protect bugs.
- They can grow young cucumber when it has 2 or 3 leaves and grow it in the evening.
- We can sprinkle the compost of straw before or after growing to protect the sunlight.

5. Making trellis

○ Put trellis when young cucumber is 10 to 15 days or after growing, also.

6. Taking care

- ❖ After growing cucumber for 7 to 10 days, have to pull weeds.
- ❖ Stick in the ground repeatedly at a clump of cucumber.
- ❖ Use organic fertilizer or liquid EM for cucumber.
- ❖ Water cucumber wetly.

7. Harvesting

We can harvest cucumber is it depends on each kind of cucumber seed as follows,

- Cucumber uses for short time from 35 to 40 days
- Cucumber uses for medium time from 40 to 50 days
- Cucumber uses for long time from 50 to 60 days.
